

All-in-One Fax Solution for
the Healthcare Industry

By Sanah

The healthcare industry still depends heavily on organized paperwork, a lot of which stems from receiving external facsimiles. These faxes often contain sensitive information such as medical records, lab values, procedure reports from hospitals and other such critical patient information. Receiving, routing, and filing faxes are a big part of any staff member's job. Significant time is wasted checking the fax machine for faxes, copying faxes for distribution, and routing faxes to the appropriate personnel. In addition, staff is usually required to file the fax in the appropriate medical record. For organizations with electronic medical records, this involves extra time scanning faxes and attaching them to the appropriate EMR. This usually results in a backlog of unfiled faxes, creating many opportunities for patient information to get lost.

Introducing allFax: The All-in-One Fax Solution

allFax is the only comprehensive fax solution designed specifically for the healthcare industry. Using a combination of securely hosted fax servers and highly trained personnel, allFax helps healthcare professionals receive and manage their faxes more efficiently while reducing fax management costs dramatically.

All Digital Faxes:

- No more paper based faxes; all faxes are received digitally
- Digital faxes are in PDF format
- 24/7 web access to your faxes
- Fax directly from your desktop and/or email system

Hosted Solution

- Nothing to install
- No upfront investment costs
- Secure fax server and archive database

- No maintenance of fax servers or related software
- 24*7 Support

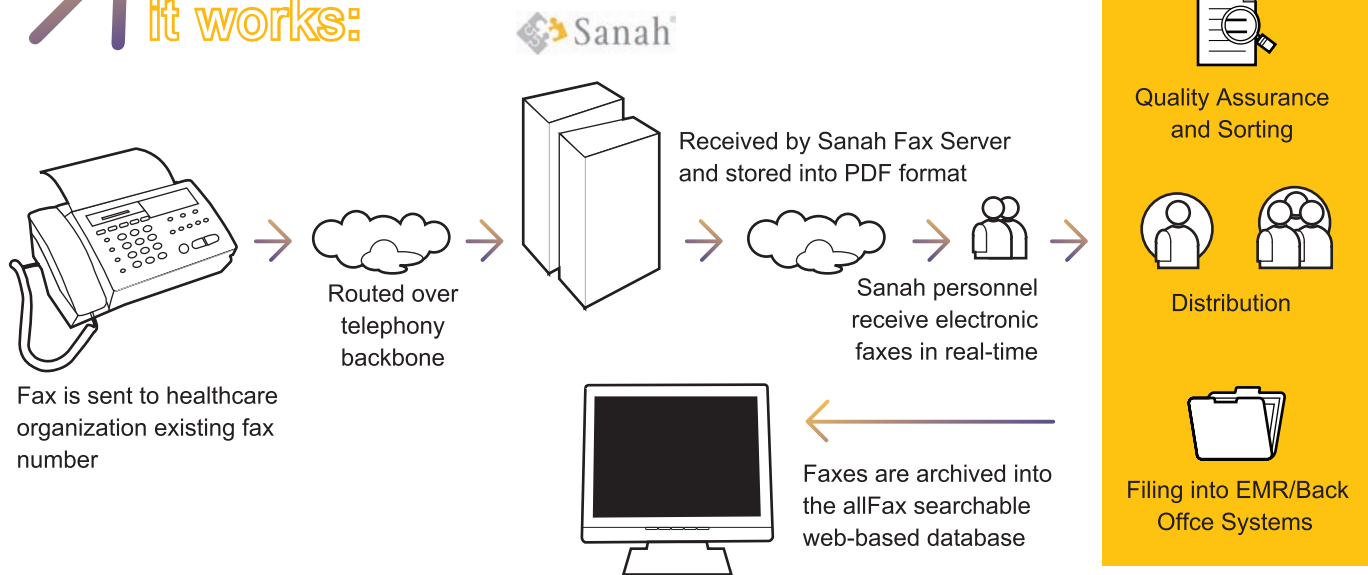

Efficient Routing:

- Incoming faxes are quality checked and sorted within 15 minutes of receipt
- Trained personnel then route faxes to the appropriate recipients or groups of recipients
- Incoming faxes are received directly into recipients email boxes, eliminating the need to constantly monitor the fax machine or paper inbox for faxes

Filing and Archiving

- All faxes received are routed and filed into the appropriate electronic medical record simultaneously, eliminating the backlog of paper faxes to be filed
- All faxes are archived in an easily searchable web-based database; this provides a 100% backup of all faxes available 24/7

Here is how it works:

- Faxes can be retrieved in a multiple of ways depending on user's preference and convenience
1) Personal Email Box 2) EMR or Back-office-system and 3) allFax web-based archive database

Dramatic Cost Savings:

The advantage of the allFax solution goes beyond increased efficiency; it reduces the cost of sending and receiving faxes by 40-70% depending on your fax volume.

- No upfront investment in fax machines or fax servers
- No maintenance costs associated with fax machines or fax servers
- Reduced use of supplies such as paper, toner, etc.
- Reduced labor time to send and receive faxes digitally
- Reduced labor time to copy, route and file faxes

Technical Features:

allFax uses state of the art fax technology designed to simplify workflow in the healthcare organization.

- Desktop faxing
- Automated production faxing
- Faxing directly from applications such as Microsoft Office
- Sending faxes to multiple email and fax recipients
- Document management system integration
- Electronic workflow integration
- Fax from copiers, scanners and MFP touch screens
- Multilanguage character support
- Leading-edge development tools for custom fax

No-Compromise Security:

Digital routing and filing means there is little paperwork lying around to compromise on patient privacy. allFax uses a point-to-point secure connection instead of transmitting digital faxes over the internet as many fax solution providers do. This secure connection ensures faxes cannot be intercepted at any stage over the Internet. allFax's web-based archive database ensures you are compliant with HIPAA's

security policy of having a digital backup of all electronic patient information. In addition, our security policy is in accordance with HIPAA security protection guidelines.

allFax is the only complete and comprehensive solution for sending and receiving digital faxes specifically designed for the healthcare industry. Faxes are received in digital format, routed and attached to patient's EMR by skilled personnel. allFax frees up valuable time from your staff from managing faxes, allowing them to spend more time on higher value patient care functions.
